Abhishek Rana

Software Engineer | Backend Developer | Node.js | NestJS | TypeScript | Microservices

Mohali, Punjab, India | abhishek.rana.tech@gmail.com | +91 88378 89272 | linkedin.com/in/abhishek-rana-a8ba73203

SUMMARY

Software Engineer with 5+ years of experience in backend development, building REST APIs, event-driven microservices and real-time systems with Node.js, NestJS, Express.js and TypeScript. Currently building Banking-as-a-Service (BaaS) and CeFi fintech platforms at Antier Solutions using Kafka, RabbitMQ, gRPC, Redis and BullMQ across PostgreSQL, MySQL and MongoDB. Experienced in database design, SQL query optimization, Web3.js blockchain integration and React.js dashboards. Interested in fintech, scalable distributed systems and clean, secure code.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, SQL

Backend: Node.js, NestJS, Express.js, REST APIs, Microservices, Event-Driven Architecture, Background Jobs

Messaging and Real-Time: Apache Kafka, RabbitMQ, gRPC, Redis, BullMQ, Socket.io, WebSockets

Databases: PostgreSQL, MySQL, MongoDB, Redis; schema design, indexing, query optimization, transactions, migrations

Frontend: React.js, admin dashboards, data visualization, charts

Fintech and Blockchain: Banking as a Service (BaaS), CeFi, Web3.js, on-chain wallet and token transactions

Tools: Docker, Git, JIRA, Postman, Agile/Scrum, AI-assisted development (Claude)

WORK EXPERIENCE

Software Engineer, Antier Solutions, Mohali | Mar 2023 - Present

- Build backend services in Node.js, NestJS and TypeScript for the CeFi business line, including Banking-as-a-Service platforms that connect traditional finance workflows with Web3 rails.
- Design event-driven microservices with Kafka and RabbitMQ for reliable asynchronous processing across distributed services, with gRPC for inter-service communication.
- Run background job processing and scheduling with BullMQ; use Redis for caching and session state.
- Integrate blockchain features with Web3.js: wallet balances, token transfers, deposits and withdrawals within fintech products.
- Design data models across PostgreSQL, MySQL and MongoDB; load large transaction datasets with bulk inserts and upserts (no duplicate records) and write JOINs, CTEs and window-function queries for reports.
- Keep financial data accurate and secure: wrap balance updates in database transactions, prevent deadlocks with short transactions, consistent lock order and retries, run schema migrations with rollbacks, and block SQL injection with parameterized queries.
- Build React.js admin dashboards and internal tools for operations teams, kept fast on millions of rows with indexes, pre-aggregated tables, server-side pagination and Redis caching.
- Use AI-assisted development tools (Claude) to speed up code review, debugging and documentation.

Web Developer, CQLsys Technologies Pvt. Ltd., Mohali | Mar 2021 - Feb 2023

- Developed and maintained RESTful APIs and web applications with Node.js and Express.js.
- Modeled and queried data across MySQL, PostgreSQL and MongoDB for product features.
- Tested and documented APIs with Postman; built front-end features in React.js.
- Worked with cross-functional teams in an Agile workflow using Git and JIRA.

EDUCATION

Bachelor of Computer Applications (BCA), Punjabi University, Patiala | Aug 2016 - Oct 2019
